

## Claims

I claim:

1. A system for altering the appearance of an interior space,  
5 comprising:  
a plurality of computer-controlled devices comprising:  
a plurality of video display screens arranged about the  
interior space for displaying a plurality of video images received from  
a central processing unit;  
10 a plurality of speakers associated and placed proximate to  
the video display screens for electronically playing a plurality of audio  
inputs received from the central processing unit, wherein the audio  
inputs replicate ambient sounds associated with the video images; and  
a scent generator placed within the interior space for  
15 dispensing a scent in response to receiving a signal from the central  
processing unit, the scent being associated with at least one video  
image displayed on the plurality of video display screens; and  
a central processing unit operable to control and coordinate the  
operation of the computer-controlled devices to alter the appearance  
20 of the interior space.
2. The system of claim 1, further comprising a plurality of  
auxiliary speakers for playing a plurality of background sounds,  
wherein the complementary sounds are associated with the video  
25 images.

3. The system of claim 1, wherein the video display screens are positioned within the interior space to provide at least 270 degrees of coverage.

5 4. The system of claim 1, wherein the video display screens are separated from one another by about eight feet.

5. The system of claim 1, wherein the video display screens are high definition plasma display screens.

10

6. The system of claim 1, wherein the video signals displayed on the plurality of video display screens comprises digital images of environmental scenes.

15

7. The system of claim 6, wherein the digital images of environmental scenes displayed on the plurality of digital display screens are coordinated.

20 8. The system of claim 1, wherein the audio signals comprise digital representations of sounds associated with the environmental scenes and is coordinated with the video signal.

9. A system for altering the appearance of an interior space, comprising:

a plurality of plasma display screens spaced apart from one another around the interior space;

5 a plurality of primary speakers, wherein at least two primary speakers are positioned proximate to each one of the plurality of plasma display screens;

and

a central processing unit comprising:

10 a storage device for storing

a plurality of video images depicting a plurality of environmental scenes; and

a plurality of audio data that replicate the sounds associated with the plurality of environmental scenes;

15 wherein the video images are transmitted to the plurality of plasma display devices such that each video images are coordinated with every other video image displayed on every other plasma display screen to produce the environmental scene, and

20 wherein the audio data associated with a particular video image displayed on a particular plasma display screen is transmitted to the at least two speakers place proximate to the plasma display screen.

10. The system of claim 9, further comprising a scent generator to distribute a scent within the interior space, the scent being  
25 associated with the environmental scene.

11. The system of claim 9, further comprising a plurality of auxiliary speakers arranged within the interior space to play a complementary audio signal associated with the environmental scene.

5 12. The system of claim 9, wherein the central processing unit further comprises:

a digital controller for coordinating the display of video images and the playing of audio images to present and the dispensing of the scent.

10

13. The system of claim 9, wherein the plasma display screens are arranged within the interior space such that each plasma display is separated from every other plasma display screen by about eight feet.

15

14. The system of claim 13, further comprising a plurality of theatrical props arranged within the interior space, the theatrical props being associated with the environmental scene displayed on the plurality of plasma display screens.

20

15. A method of altering the appearance of an interior space by electronically displaying an environmental scene, comprising:
- installing a plurality of computer-assisted devices within the interior space, to electronically present the environmental scene, the
  - 5 computer-assisted devices comprising;
    - a plurality of video display screens;
    - a plurality of speakers placed proximate to the video display screens;
    - a plurality of lighting elements; and
    - 10 a scent generator to dispense a scent associated with the environmental scene;
  - producing the environmental scene, comprising:
    - capturing video images associated with the environmental scene; and
    - 15 recording audio data associated with the environmental scene; and
    - loading the video images and audio data associated with the environmental scene into a processing unit; and
    - displaying the video images on the plurality of video display
    - 20 screens and playing the audio data on the plurality of primary speakers in a coordinated scheme
    - changing an interior space by providing movable elements comprising design elements, and providing computer-assisted devices

25
